R-410a (125 lb.)

R-422d (25 lb.)

R-507 (25 lb.)

Additional refrigerants are available by request.

Please call for pricing. We will meet or beat current market pricing.

Services

Recovered Refrigerant:

We accept all recovered refrigerant and all sizes of recovery cylinders. We pay fair market prices for large quantities of recovered R-22 that is not mixed, because that refrigerant can be processed, reclaimed, and put back into circulation for re-use. We will also pay for burnt R-22 that is not mixed. We are your best – and quickest – option for getting rid of your recovered refrigerant. We provide fast service as well as on-site weigh-in and refrigerant testing.

How It Works:

1. Service techs bring their recovery cylinders to our shop.
2. We will weigh each cylinder to determine its gross weight. Next we subtract the tare weight (TW) of the recovery cylinder to determine the amount of gross material contained in the cylinder.
3. We will test the recovered refrigerant to determine if it is 100% R-22 or if it is a blend or mixed refrigerant.
4. We will record the weights and test data on a Refrigerant Collection Report and provide a copy to the tech.

5. **Recovery Cylinder Empty and Evacuate:** We empty and evacuate the recovery cylinders compliant with EPA regulations. We evacuate recovery cylinders to 29" Hg. You can count on it.
6. Choose either **Cylinder Exchange** or **Yellow-Tag**.
 - **Cylinder Exchange:** If the customer wants to leave their recovery cylinders with us, we will exchange recovery cylinders on a one-for-one basis at no charge and with no deposit. The customer will receive recovery cylinders that are evacuated and ready to use.
 - **Customer-Owned:** If the customer wants to continue using their owned recovery cylinders, we will **Yellow-Tag** the cylinders with the customer's name. We will empty the recovery cylinders and evacuate them overnight to 29" Hg. The customer-owned recovery cylinders will be available for the customer usually within one week of drop-off.

Refrigerant Collection Report:

Lone Star Tec's Refrigerant Collection Report provides details for each tank of recovered refrigerant that customers turn in to us. Following is a list of what information is contained in the Refrigerant Collection Report.

- Size of each recovery cylinder turned in
- Gross Weight of each recovery cylinder
- Tare Weight of each recovery cylinder
- Net Weight of each recovery cylinder
- Amount of material in each recovery cylinder
- Test results from testing the vapor of each recovery cylinder

Service Charges:

Recovery Cylinder Empty and Evacuate (E&E)

– No Empty & Evacuate fees.
